GENERAL COMMENTS AND OBSERVATIONS

Visitors are advised to take out health insurance and travel assistance, which includes medical care for Covid-19.

Upon arrival in Cabo Verde, your body temperature is checked.

If it is higher than 37.5°C, you will be sent to an isolated room at the airport for further evaluation.

If you have fever, a cough or shortness of breath, you will be subjected to a test approved by the local authorities for Covid-19.

While waiting for the results, you will remain in the existing and certified isolation and treatment center.

While staying within the national territory, foreign visitors must, like nationals and residents, follow the rules, at all the times, instructions, health and safety measures in force in the country, as well as the instructions of the authorities, until

the moment they leave the national territory, to ensure, throughout their stay, that they maintain the necessary health security and physical integrity, while having a pleasant experience on their trip to Cabo Verde, so that, hopefully, they can visit the country again.

To see the measures implemented by the Government of Cabo Verde to combat and prevent Covid-19, users can access the link <https://covid19.cv/>

IN THE AIRPORT

a

ALWAYS MAINTAIN THE MINIMUM SOCIAL DISTANCE OF A METER AND A HALF stipulated by law.

b

SANITIZE YOUR HANDS FREQUENTLY AND AVOID TOUCHING HANDRAILS, COUNTERTOPS OR OTHER SURFACES

There are alcohol-based gel hand sanitizer dispensers throughout the airport area.

7

C

CHOOSE TO USE DISPOSABLE PACKAGING instead of the returnable ones, if you eat or drink something.

d

FOLLOW THE GUIDELINES OF THE AUTHORITIES OR A TRAVEL AGENT, if your trip is part of a travel agency's service package.

e

KEEP YOUR PROTECTIVE FACE MASK ON. Its use is not mandatory, but is recommended in any situation of crowding and closed spaces.

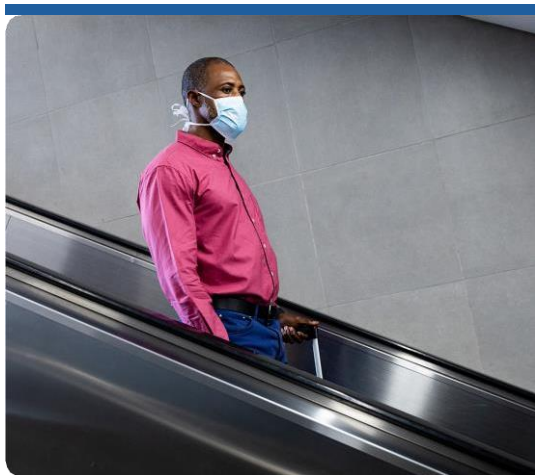

8

f

WHEN LEAVING THE AIRPORT, FOLLOW ALL INSTRUCTIONS FROM LOCAL AUTHORITIES.

(if you have a connecting flight or are in transit to another island or another country, stay at the airport and follow the recommendations, always respecting the rules and protocols, so that you remain safe until the time of your flight.) The use of facial masks is still imposed on passengers collective transportation, airplanes, ships and buses, as well as health establishments.

PROCEDURES AND PROTOCOLS

PCR OR ANTIGENS TESTS IN CABO VERDE FOR DEPARTING VISITORS

RT-PCR OR ANTIGENS TEST to leave Cabo Verde are not mandatory for visitors whose countries of origin do not require that.

RT-PCR OR ANTIGENS TEST are available in every islands.

Visitors who need to perform tests should contact the Public Health Authority up to 72 / 48 hours to make the necessary arrangements

The SARS-CoV-2 identification testing for international travel has a fixed price of PCR -6500\$00 (six thousand five hundred escudos - approximately 59€) and 2500\$00 (around, twenty three euros)

SYMPTOMATIC CASES

Emergency Procedures

Visitors who develop symptoms of a possible respiratory infection (fever, cough, shortness of breath) will be referred to the health services for prompt attention. In case it is confirmed with a PCR OR ANTIGENS TEST that the visitor is infected with COVID-19, the Public Health Authority requires that the visitor be isolated in one of the existing treatment centers until recovery from the infection. **11**

Suspicious cases will require isolation. If you are in a hotel, you must stay inside the room and cannot leave until you have the test results. In this case, the PCR or antigen test will be prioritized so that results can be obtained within 24 hours and thus a decision can be made on whether to continue in the hotel or go to an isolation space.

If the result is positive, the visitor will be transferred to the isolation space already identified by the country's authorities, whether showing symptoms or not.

In the case of a child or person with special needs or reduced mobility, they will be accompanied by an adult (father, mother, or guardian), fulfilling all preventive measures, if the adult is negative.

- The sample will be collected preferably at the hotel to avoid the circulation of the suspicious case.

- The isolation/treatment for mild cases, according to the current national guidelines, for asymptomatic patients, is 10 days from the date of sample collection and 13 days at least for symptomatic patients from the first day of the onset of symptoms.

- For special care there are Intensive Care Centers prepared and certified by internationally ¹³ accredited entities.

- The costs of treatment and accommodation in Cabo Verde are charged to users and/or operators/insurers, as appropriate.

- Everyone is advised to travel with international health insurance coverage, including Covid-19 care.

ASYMPTOMATIC CASES

- All cases, symptomatic or not, must comply with the isolation requirements at the Covid-19 Treatment Centers indicated by the health authorities, for a period of 10 days.
- Hotel establishments should monitor all identified cases until the arrival of health authorities, who will evaluate the situation, to better decide the measures to be taken.
- Cases with mild symptoms will be referred to the existing treatment centers, following the procedures and protocols, until their discharge.

14

More severe cases requiring special treatment and attention will be treated in hospitals, and if justified, will be admitted to the intensive care units prepared and certified for this purpose.
